

Rube Goldberg Projects

You were asked by Rube Goldberg to help design a machine to complete a task around the house. You and your group must come up with an invention that includes:

- 2 ramps
- 1 fixed pulley
- 1 movable pulley
- 2 levers
- At least ten steps to complete

In addition to the picture, you must number and explain all of the steps at the bottom of your poster.

This project will be due on **Friday, February 10**. You will be given some class time to work on it, but some work may need to be done at home, so plan accordingly. Make sure to be creative and color your invention!
